

Install PHP

Let's install PHP:

Firstly we need to change the Ondřej repo to noble, this is because the Ondřej Surý PPA does not provide support for 24.10:

```
sudo add-apt-repository ppa:ondrej/php
sudo add-apt-repository ppa:ondrej/apache2
sudo sed -i 's/oracular/noble/g' /etc/apt/sources.list.d/ondrej-ubuntu-php-oracular.sources
sudo sed -i 's/oracular/noble/g' /etc/apt/sources.list.d/ondrej-ubuntu-apache2-oracular.sources
sudo apt update
```

Now we can install the PHP and functions we require:

```
sudo apt install php8.4 php8.4-cli -y
sudo apt install php8.4-{bz2,curl,mbstring,intl,fpm,gd,mysqlnd,opcache,zip,intl,common,bcmath,readline,apcu,xml,dom,mcrypt} -y
sudo apt install php-cli php-mailparse -y
```
