

Install PHP

Now we've got Apache sorted, we can install PHP, we recommend the [Remi Repo](#) for this, however you can use any repository you prefer:

```
dnf install https://rpms.remirepo.net/enterprise/remi-release-9.rpm -y
dnf module switch-to php:remi-8.3/common -y
```

Finally to finish PHP off we need to install the PHP modules required for Ticaga:

```
sudo dnf install php php-cli php-fpm php-curl php-mysqlnd php-gd php-opcache php-zip php-intl php-common
php-bcmath php-json php-readline php-mbstring php-apcu php-xml php-dom -y
```
