

Linking Clients

Our WHMCS module automatically creates accounts on Ticaga when a customer registers to your WHMCS installation, this keeps everything simple and easy.

You can see their Ticaga customer ID by going to their profile:

The screenshot displays a WHMCS client profile page with a navigation menu at the top containing tabs for Summary, Profile, Users, Contacts, Products/Services, Domains, Billable Items, Invoices, Quotes, Transactions, Tickets, Emails, Notes (0), and Log. A 'View Marketing Opt-In Consent History' button is located in the top right corner. The profile form is divided into two columns. The left column includes fields for First Name (Michael), Last Name (Dance), Company Name (Ticaga Ltd), Email Address (demo@example.com), Language (Default), Status (Active), Client Group (None), and Email Notifications (with checkboxes for General, Invoice, Support, Product, Domain, and Affiliate emails, and a 'Check All' button). The right column includes Address 1 (123 Street), Address 2 (Optional), City (Town Name), State/Region (Warwickshire), Postcode, Country (United Kingdom), Phone Number (+44 7400 123456), Payment Method (Select to Change Default), Billing Contact (Default), and Currency (USD). At the bottom, the Ticaga ID is shown as 9.

If you've already got customers on WHMCS and then connect Ticaga, when your customer logs in the module will create them an account automatically and link them up.

Revision #1
